

INSTA-FOOTING – INSTALLATION MANUAL

STEPS:

Step 1: Ensure the concrete slab is clean and level¹.

Step 2: Position plate under location of the post to be installed.

Step 3: Install post into plate and use 16d common nails or 16d x 2-½ joist hanger nails into all available nails holes. Do not install bolts into the ½" pilot hole on the post connector.

Step 4: Secure plate to floor with either two ½" diameter by 2.5" long concrete expansion anchors or two concrete anchor screws or two powder driven nails.

¹*The Insta-Footing plate must be installed on clean and level concrete. If the concrete is not level, then a non-shrink leveling grout must be installed first in order for the plate to sit on a level surface and evenly distribute the loads to the concrete floor slab.*
